(54) Title: AN OPTICAL DATA READING/WRITING DEVICE HAVING TWIN READ AND WRITE BEAMS

(57) Abstract: A method is proposed that allows a static design of an optical pickup unit (OPU) that delivers two output beams (30, 32). Both laser beams (30, 32) result in successive spots, which have the appropriate characteristics. In this OPU concept both read and write spots are present at the same time, and they are sufficiently spaced apart in the focus direction. This allows switching from the read situation to the write situation by introducing an appropriate focus offset in the electronics.
